A currency technology company of  **TAURO**
TAURO GROUP

Operating in pole position

Tailor-made for a new level of efficiency: the BPS C5^{evo} precisely fulfills banknote processing requirements, with outstanding efficiency, flexibility, and performance

At G+D, we recognize the critical need for efficiency, security, and reliability in commercial banks, cash centers, and casinos. The new BPS C5^{evo} addresses the challenges of today's dynamic cash-handling environments with unmatched performance and flexibility, helping businesses streamline processes, boost productivity, and adapt to evolving demands—all while reducing costs.

Meeting the needs of today and tomorrow

The solution from G+D is a modular, scalable system that fulfills all process requirements with the greatest reliability, efficiency, and user-friendliness. A high nominal throughput of up to 63,000 banknotes per hour, an exceptionally flexible modular concept, state-of-the-art, framework-compliant sensors, and a multitude of software options combine to

offer significant competitive advantages. A new option, the Bander Delivery Module, will significantly enhance the operator's productivity.

Equipped with the best connections And that's not all: the BPS C5^{evo} is designed to fully leverage the advantages of advanced connectivity. When integrated with cash management software like Compass Cash Center Enterprise, it provides management views through the Compass Asset Manager interface, ensuring systems are always up-to-date. Additionally, elements of the BPS Eco-System, such as a remote service connection, enhance transparency, security, and operational efficiency across the entire process.

25

The modular concept of the BPS C5 allows up to 6 output modules in total and thus enables wide-ranging configuration options: e.g. opt for up to 25 output stackers to meet diverse customer requirements
